

2021 Carolinas Chapter Artificial Intelligence Spring Conference

Artificial Intelligence (AI) has become present in so many elements of our daily lives (some known, but in many cases unbeknownst) serving society in myriad ways while at the same time astonishing and alarming us. AI has already fulfilled use cases where the technology helps us build machines, grow food, and cure diseases. On the other hand, AI clearly can threaten our privacy, create deep fake images, and control weapons of war. We have reached the point where to ensure the path we are going down leads to utopia and not dystopia, AI demands a humanity inspired balancing act – hence the dawn of a new discipline – AI Ethics.

Presentations

- AI Algorithm Use Cases and Transparency
- AI Ethics – Companies, Employees, Stakeholders and Society at Large
- AI Panelist Roundtable – AI Outlook
- Breakout Sessions - *Following Webinar*
